DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to a piezoelectric transducer, classified in class 310, subclass 320.
- II. Claim 17, drawn to differently shaped piezoelectric elements, classified in class 310, subclass 367.
- III. Claim 18, drawn to a layered piezoelectric device, classified in class 310, subclass 328.
- IV. Claims 19-21, drawn to a layered piezoelectric device made by a specific method, classified in class 310, subclass 311.
- V. Claims 22-24, drawn to an ultrasonic probe, classified in class 310, subclass 334.
- VI. Claims 25-29, drawn to a method of making a piezoelectric device, classified in class 29, subclass 25.35.

The inventions are distinct, each from the other because of the following reasons:

Inventions of the apparatus claims and the method claims are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another

Art Unit: 2834

and materially different process (MPEP § 806.05(f)). In the instant case the processes can be used to make other devices such as a capacitor bank, piezoelectric motor components, et al.

Inventions of Group I and Groups II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, and at a minimum, the different inventions the first group is noted as a transducer, the other groups give no such indication.

Inventions of Groups I-IV and Groups V-VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, and at a minimum, the different inventions the first group is noted as a transducer, the other groups give no such indication. The inventions are not disclosed as capable of use together.

Inventions of Group V and Group VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, and at a minimum, the different inventions the first group is noted as a transducer, the other groups give no such indication. The inventions are not disclosed as capable of use together.

Art Unit: 2834

Because these inventions are distinct for the reasons given above and the search required for the groups is different, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
